Webinar Registration Link: <https://attendee.gotowebinar.com/register/6508750810447087116>

Overview

In early 2020, hackers secretly broke into Texas-based SolarWind's systems and added malicious code into the company's software system. The system, called "Orion," is widely used by companies to manage IT resources and has 33,000 customers that use Orion, according to [SEC documents](#).

Most software providers regularly send out updates to their systems, whether it's fixing a bug or adding new features. SolarWinds is no exception. Beginning as early as March of 2020, SolarWinds unwittingly sent out software updates to its customers that included the hacked code.

The code created a backdoor to customer's information technology systems, which hackers then used to install even more [malware](#) that helped them spy on companies and organizations.

To keep you on top of the evolving cyber challenges and ways to ensure your organization is more cyber resilient, we offer our latest opportunity engage in a vendor agnostic setting by bringing forward the industry leaders to share their insights & advice.

Discussion Topics That We Will Cover:

- **SolarWinds Breach Overview- Who, What, When, Where ,Why ,& How**
